

CÓMO QUEDA EL GR LÁSER EN CADA MATERIAL

INFORMACIÓN

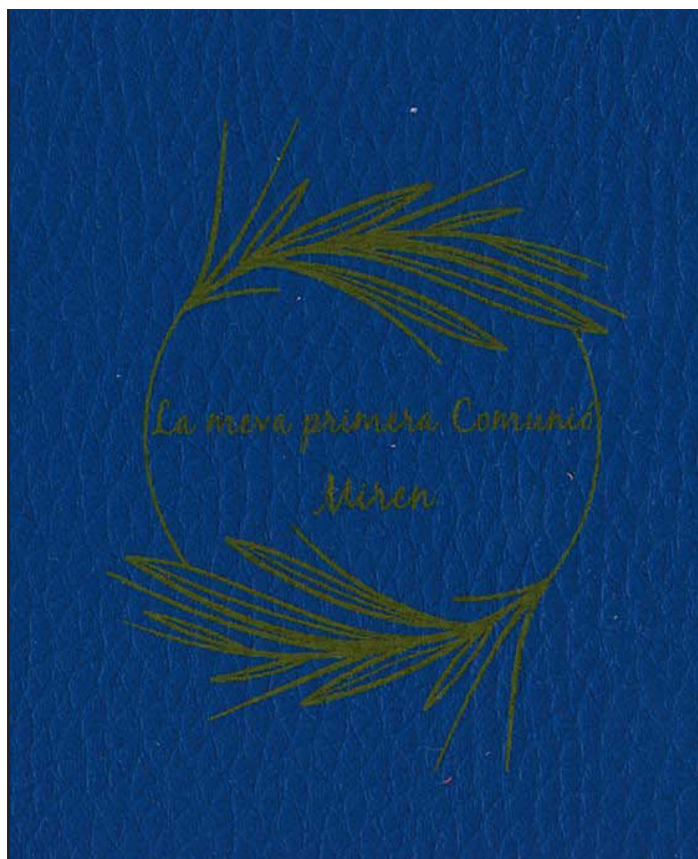

Hemos grabado el mismo archivo en todos los materiales sobre los que la grabación a láser está disponible, de forma que puedas observar como quedará tu composición de una manera aproximada cuando ésta sea grabada a láser.

En algunos materiales no se hace distinción entre diversos tonos de grises, mientras que en la mayoría de ellos el degradado a negro se hace progresivo, permitiendo así un mayor juego con la escala de grises existente. Recomendamos evitar grandes trozos de tonalidades negras.

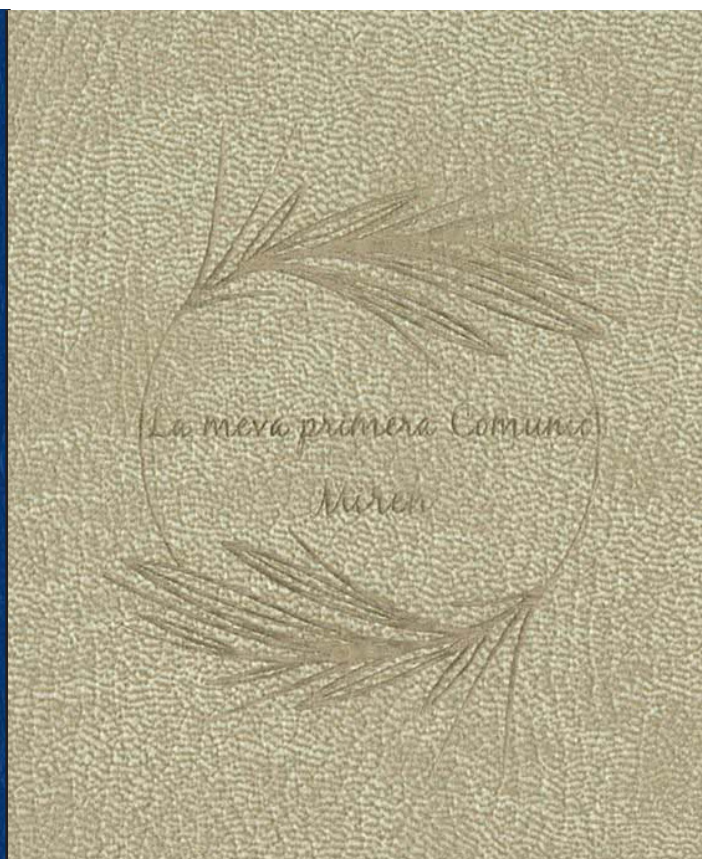

Recuerda que la grabación a láser es gratuita y que la deficiencia es máxima y absoluta.
